

Kodaikanal Observatory

Bulletin No. CXLI

PART I

SUMMARY OF PROMINENCE OBSERVATIONS FOR THE SECOND HALF OF 1953

This bulletin embodies the results of observations of prominences made at Kodaikanal Observatory during the 2nd half of 1953, supplemented by data from other foreign observatories for those days on which Kodaikanal had imperfect or no photographs. We take this opportunity to thank the observatories at Mt. Wilson and Meudon who have been kind enough to send their spectroheliograms for the missing days.

K-prominences at the limb —During the half-year under review, photographs of calcium prominences at the limb were obtained at Kodaikanal on 100 days, and the plates for all the days were utilised for the computations. Spectroheliograms for 71 days were obtained from Mt Wilson Observatory and for 42 days from the Meudon Observatory. In all, the records were complete for 179 days during the half year and these were counted as 178½ effective days after giving due weightage for the quality of the photographs.

The mean daily areas (in square minutes of arc) and the mean daily numbers derived from all the above records are given below:—

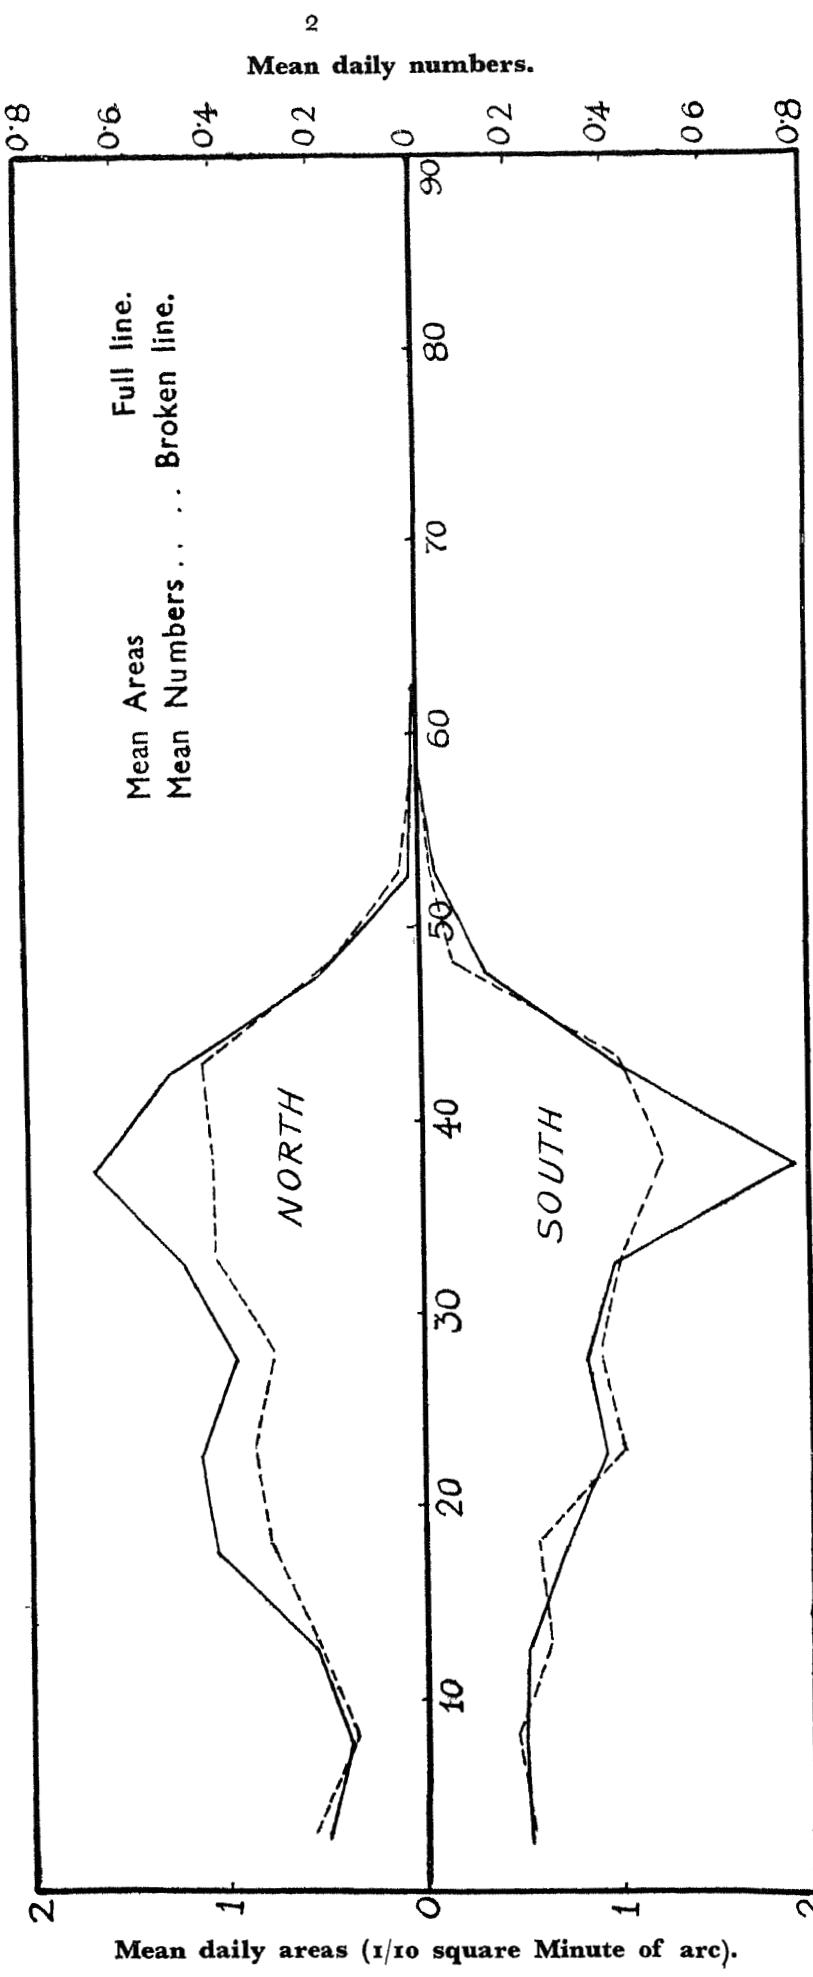

The above figures show that compared to the previous half year there has been a decrease in both areas and numbers, the decrease being 2·2% in areas and 8·5% in numbers.

For comparison with the data published in bulletins prior to 1923, i.e., before the co-operation of other observatories came into force, the values based on Kodaikanal observations alone are given below —

The distribution of areas and numbers in 5° ranges of latitude is represented in diagram I.

DIAGRAM I

Mean Areas and Mean Numbers
of Calcium Prominences.
July to December 1953.

The curves for area show pronounced peaks of activity in the latitude zone 35° - 40° with secondary maxima in the zone 20° - 25° in both the hemispheres.

The monthly, quarterly and half-yearly areas, numbers, heights and extents of prominences as obtained from photographs of all the three observatories are shown in the following table.—

TABLE I

Months 1953	Number of days (effective)	Area (square minutes)	Numbers	Daily means		Mean height "	Mean Extent °
				Areas (sq minutes)	Numbers		
July	31	61.40	205	1.98	6.61	48.37	2.35
August	31	50.95	164	1.64	5.29	43.08	2.45
September	30	73.65	233	2.45	7.77	48.80	3.09
October	30 $\frac{1}{2}$	56.15	216	1.82	7.47	42.59	3.01
November	27 $\frac{1}{2}$	36.85	147	1.34	5.35	36.19	3.05
December	28	40.35*	167	1.44	5.96	40.93	2.57
3rd quarter	92	186.00	602	2.02	6.54	47.09	2.66
4th quarter	86 $\frac{1}{2}$	133.35	530	1.55	6.13	40.29	2.89
2nd half year	178 $\frac{1}{2}$	319.35	1132	1.79	6.35	43.91	2.77

The following table gives the distribution of prominences about the sun's axis of rotation.

1953 July—December		East	West	Percentage east
Total areas (square minutes)		149.90	169.45	46.94
Total numbers		542	590	47.88

Observations with the Prominence Spectroscope

No metallic or eruptive prominence was observed during the half year. Particulars of displacements observed in the chromosphere and prominences with the spectroscope are given in the following table:—

TABLE II

Date 1953	Time of observa- tion (I.S T.)	Latitude		Limb	Displacements	
		North °	South °		Red A°	Violet A°
	H. M.					
August 19	09 00	35	..	W	0.6	0.6
August 26	08 25	37	..	E	0.8	0.8
August 26	08 30		33	W	0.9	0.8
September 3	08 00	35	..	E	1.5	..
September 8	08 00	30	..	E	0.5	0.5
September 8	08 00		30	W	0.5	0.5
November 3	08 00	20	..	W	1	..

No bright reversal of H-alpha line or dark reversal of D₃ line on the disc was observed.

Mean heights in H-alpha, D₃ and H_B of 8 prominences observed with the spectroscope and mean height in K line of the same prominences as measured from calcium spectroheliograms are given below —

Mean height		
	"	
K 46 4	
H-alpha 37 8	
D ₃ 29 7	
H _B 27 8	

Observations with the Hale Spectrohelioscope

Details of Doppler displacements in H-alpha line observed in prominences and dark markings are given below —

	North	South	East	West	Total	Displacements		
						To red	To violet	Both ways
Displacements in prominences	13	4	9	8	17	2	1	14
Displacements in dark markings	4	1	4	1	5	5

Solar Flares

Details of solar flares observed during the period are given below —

Date 1953	Time (I S.T.)			Mean latitude	Mean longitude from Central meridian	Intensity	Maximum width of H-alpha line observed	Remarks
	Beginning	Maximum	End					
August 17 . . .	H. M 09 02	H. M. ..	H. M. ..	7°N	2°E	1	1·4 A°	Maximum and end could not be observed due to the interruption by passing clouds

No sudden disappearance of K-prominences or H-alpha absorption markings was observed during the period.

Prominences projected on the disc as absorption markings

During the period under review, photographs of the sun's disc in H-alpha line were obtained at Kodaikanal on 118 days. Spectroheliograms were also received for 66 days from Mt. Wilson Observatory and for 35 days from Meudon Observatory. On the whole records were available for 182 days which were counted as 181 $\frac{1}{4}$ effective days after weightage according to the quality of the photographs.

The mean daily areas in millionths of the sun's visible hemisphere (uncorrected for foreshortening) and the mean daily numbers of the H-alpha dark markings as derived from the combined photographs are given below.—

Combined data		
	Mean daily areas (millionths of the sun's visible hemisphere)	Mean daily number
North . . .	707.94	7.41
South . . .	373.63	4.21
TOTAL	1081.57	11.62

On comparing with the previous half year's values, these figures show a decrease in activity in areas as in the case of prominences. The areas show a decrease of 10.1%; the numbers do not, however, show any appreciable change.

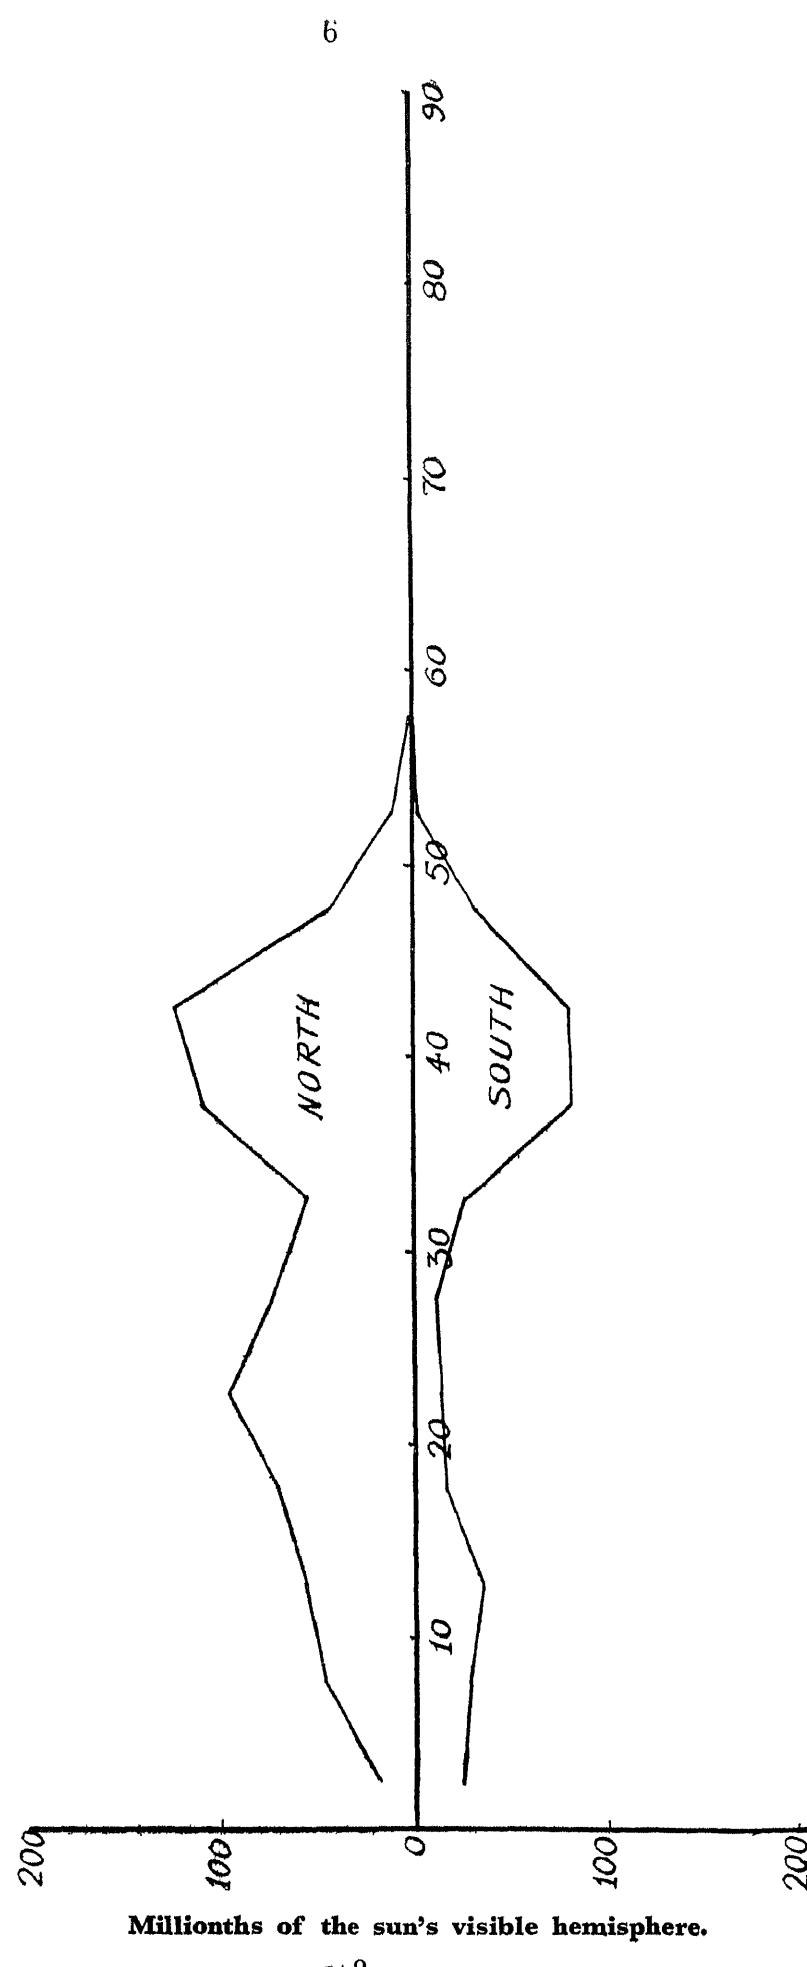

The figures based solely on Kodaikanal photographs are also given for comparison with similar data.

Kodaikanal data only		
	Mean daily areas (millionths of sun's visible hemisphere)	Mean daily numbers
North	686.28	7.49
South	351.65	4.13
TOTAL	1037.93	11.62

The distribution of the areas of the markings in 5° ranges of latitude as obtained from the combined data is shown in diagram II.

DIAGRAM II

Mean Areas of H-alpha Absorption Markings.
July to December 1953.

There are two zones of maximum activity of the markings in the northern hemisphere in the latitude intervals 20°-25°N and 40°-45°N. The activity in the southern hemisphere is comparatively less, the maximum being in the latitude zone 35°-45°S.

The distribution of total areas and numbers of the dark markings east and west of the sun's axis is given below.—

	Combined data		
	East	West	Percentage east
Total area (millionths of sun's visible hemisphere)	96,748 ✓	99,439.6	49.3
Total number	1,011	1,095	48.0

PART II

MAGNETIC OBSERVATIONS FOR THE SECOND HALF OF 1953

Brief descriptions of the absolute instruments, the variometers and the system of observations are available in Bulletins Nos. CXXXII and CXXXVI of this observatory. The data given in this bulletin are derived mainly from the records of the La Cour instruments, but in case of failure of La Cour records the Watson magnetograms have been used.

The adopted values of the scale co-efficients of the horizontal force and vertical force magnetographs for the second half of 1953 are 80 0Y/cm. and 110 0Y/cm. The scale co-efficient of the declination magnetograph is 15' 0/cm upto 29-11-1953 and 16' 0/cm. after that date, the changes being due to certain adjustments made to the instrument.

Trends in Magnetic variations

The mean value of and the range in horizontal force for the second half of 1953 were 39,461 γ and 91 γ respectively, showing an increase in the mean value and a decrease in the range over the corresponding values, viz. 39,441 γ and 101 γ for the first half of 1953. For the vertical force, the mean value as well as the range remained almost unchanged, the mean values for the first and the second halves being 2,414 γ and 2,415 γ respectively and the mean ranges 38 γ and 37 γ respectively. The mean westerly declination also changed only slightly, from 2°34' 6 for the first half of 1953 to 2°34' 5 for the second half. The mean range in D, however, rose from 3' 1 to 3' 6.

The recurrence tendency of moderate magnetic storms continued to be very pronounced as during the preceding six months.

KODAIKANAL.
November, 1954

A. K. DAS,
Director, Kodaikanal Observatory.

TABLE 19
PRINCIPAL MAGNETIC STORMS

July—December, 1953

Greenwich date 1953	Storm time		Sudden commencement			Degree of activity (4)	Maximal activity Greenwich day	Ranges			Remarks	
	G M T of beginning H M	G M T of ending (1) D H	Type (2)	Amplitude (3)				D	H	Z		
					γ	γ			γ	γ		
July 23	08 06	24 24	s c	+1	+30	+10	m	23	3	160	64	
July 26	. 02 40	30 01					m	27	2	156	52	
August 23 .	03 50	25 18					m	23	3	200	62	
September 18 .	15 26	21 21					m	19	3	200	73	
September 23 .	04 10	24 20					m	23	3	156	62	
October 15 .	08 42	22 15	s c	+16	+10		m	15	4	240	79	
November 12 . .	12 10	21 13					m	13	6	140	41	

The following symbols and conventions have been used according to recognised practice —

(1) Approximate time of ending of storm construed as the time of cessation of reasonably marked disturbance movements in the traces

(2) s c =sudden commencement, ()=Gradual commencement

(3) Signs of amplitude of 'D' and 'Z', taken algebraically (D—reckoned negative being westerly);

(Z—reckoned positive being vertically downwards).

(4) Storm described by three degrees of activity: (m)—for moderate (when range is less than 250 γ),

(ms)—for moderately severe (when range is between 251 γ and 400 γ),

(s)—for severe (when range is above 400 γ)
