

Kodatkanal Observatory.

BULLETIN No. XIX.

LIST OF PROMINENCES OBSERVED BETWEEN 1909 JANUARY 1
AND 1909 JUNE 30.

THIS list is a continuation of that published in Bulletin No XVII. and contains all prominences recorded both visually and photographically during the first half of 1909.

The methods of observation and the observers are the same as for the last list.

The following table shows the number of days on which observations were made:—

Date and observer.	Hour I.S.T	Base.	Latitude.		Limb.	Height.	Remarks.
			North.	South.			
1909.	H. M.	o	o	o		"	
January 4. S.S.	10 17	2	37° 5'	...	E	50	
	11			11	E	10	
	11			14° 5'	E	25	
	11			17° 5'	E	25	} Tops meet.
	6			56	E	25	
	11 20			40	W	15	
	59			36	W	20	} Detached.
	10 58			25° 5'	W	20	
	57	2		21	W	30	
	41	2		18	W	60	
	38			7° 5'	W	25	
	36		5		W	10	
	38		29		W	25	
	29		41		W	20	
	26	1° 5	55		W	15	
							Observed through passing clouds. No prominence plates.
January 5. A.Y.S.	8 58	,	56	..	E	15	Ca. A faint arch
	58		51		E	20	Ca.
	81		49° 5'		E	Low	Bright.
	58	2	44		E	20	Ca.
	58		42		E	30	
	30	1° 5	39		E	30	20" in Ca.
	58		36		E	15	Ca.
	27		24		E	10	Faint.
	25		13		E	10	
	20	10		3	E	35, 20	14° broad in Ca.
	15			12	E	25	A Ca streak from top meets limb at — 17° E. } Base and top connected in Ca., and 30", 40", and 20" high in it.

Date and observer.	Hour I.S.T.	Base.	Latitude.		Limb.	Height	Remarks.
			North.	South.			
1909.	H. M.	o	o	o		"	
January 5. A.Y.S. —contd.	8 58	...	20	E	10	Ca.

**REMARKS ON THE DISTRIBUTION OF THE PROMINENCES IN
LATITUDE FOR THE FIRST HALF OF THE YEAR 1909.**

The mean daily profile areas in square minutes of arc for each zone of 5 degrees in latitude, for the half-year ending June 30, 1909, are represented graphically in the accompanying diagram.

The total activity in each hemisphere expressed in prominence areas appears to have increased compared with the previous six months and the two hemispheres give sensibly equal areas.

The total mean areas for each hemisphere are given in the following table in which the figures for the previous six months are given for comparison :—

MEAN DAILY PROFILE AREAS OF PROMINENCES.

	1908.								1909.	
	July to December.								January to June.	
North	1·84	2·28
South	2·09	2·32
Total	..								3·93	4·60

The increase shown in the northern hemisphere is chiefly due to a new development of prominences in the zone 40° — 50° . In the south there has been a reduction of areas in the zone 50° — 60° and an increase in the region between 10° and 40° .

The polar regions in both hemispheres have become quiescent after a prolonged period of activity in the south.

Metallic prominences have been comparatively infrequent and far more restricted in latitude than during the corresponding period of 1908. Sixteen were recorded in the northern hemisphere between $+2^{\circ}$ and $+15^{\circ}$ and ten only in the south between -7° and -22° .

The highest prominence recorded during the period was photographed on January 12 in latitude $+31^{\circ}$ east. It attained a height of $285''$ and was remarkable chiefly for the amount of detail recorded on the plate, the image resembling in structure the "net-work" nebula in Cygnus.

[J. E.]

NOTES.

1909.

- January 7. (1) Lat. + 48° 5' E. Very faint. Top broader. A streak from top arches over, and meets the limb at + 44° E. In Ca the shape of the prominence was slightly different at 11^h 45^m, and the height was 45".
 (2) Lat. + 21° E. A small streak from the top arches over the prominence. This arching structure, 45" high, was seen at 8^h 28^m, but was gone at 11^h 45^m in Ca.
 9. (1) Lats. - 12° 5', - 5°, + 6°, and + 9° W. formed a single prominence in Ca at 9^h 19^m extending from + 10° to - 14° W. and 70" and 30" high. Changing. Differently shaped, and 75" and 45" high at 8^h 20^m.
 (2) Lat. + 26° W. General height in Ca is 50". Certain thin faint streamers at the top which were seen at 8^h 20^m, but were gone at 9^h 19^m, reached up to 80" in height.
 (3) Lat. + 49° 5' W. An arch. A Ca streak from the top meets the last prominence. This arch was more distinct in Ca at 9^h 19^m than at 8^h 20^m.
 12. Lats. + 42°, + 40°, + 34° 5', and + 30° E. The Ca photograph at 8^h 3^m showed a large arched prominence overhanging 25° of the limb (from + 40° E. to + 15° E.) and connected with it by 3 stems. The height was at first 160"; but several subsequent photographs showed changes both in form and height. At 9^h 30^m the prominence had not much changed in shape, but the top filaments reached a height of 280". The photograph taken in the afternoon at 14^h 27^m indicated that the greater part of the prominence had disappeared, but that a portion of the original arch still remaining had got detached from the limb, and was 285" high.
 14. Lats. - 26°, - 30° 5', and - 32° 5' E. Form a single prominence in Ca 45" high, extending from - 23° E. to - 34° E. Shape slightly different at 9^h 27^m in Ca.
 15. (1) Lat. + 1° 5' E. 20" and 25" at 8^h 48^m. Prominences from + 14° E to - 1° E had all gone by 9^h 50^m except a small one of less than 10" at lat. + 7° E.
 (2) Lat. - 11° 5' E. Ca. A small portion of this, low at 8^h 40^m but, 25" at 9^h 45^m, was seen in H at lat. - 8° E. Surmounted by a detached cloudlet 60" high.
 19. (1) Lat. - 10° 5' E. In Ca it consists of two arches 40" and 50" high, and covering 9° of the limb from - 6° E to - 15° E., with a small slanting streak from - 6° E. to - 3° E.
 (2) Lat. - 25° W. A Ca streak from the base of this prominence, 60" high, slants as far as - 20° W. This streak was seen only at 9^h 25^m on the flocculus plate.
 (3) Lat. - 10° W. Seen in Ca only, on the flocculus plate. A Ca streak 30" high flows westwards from - 4° as far as the equator.
 20. Lat. + 33°, + 30°, and + 14° E. Form a single prominence in Ca extending from + 37° to + 10° E., and 80" and 50" high. At 11^h 25^m in Ca it had a slightly different form extending from + 35° to - 7° E., and was 75" high.
 22. (1) Lat. + 12° 5' E. Showed slight displacement to red in the beginning. Later on the top showed a displacement to violet of about 0 5 Å. Changing. Weather poor for studying bright lines. In Ca this was a big prominence extending from + 18° to + 7° E., and 75", 40" and 30" in height.
 (2) Lat. + 13° W. 40" high in Ca. A Ca streak connects the top of this prominence with the base of the last prominence.
 23. (1) Lat. + 10° E. 50" high in Ca. Intensely bright. Shows displacement in most places to red of about 2 0 Å and in two places both ways of about 2 0 Å. The prominence was seen in D₁, D₂, b₁, b₂, b₃ and b₄.
 (2) Lat. - 11° E. Shows displacement to violet of about 2 5 Å at - 8°. At 10^h 3^m there was no prominence, but there was a displacement to red of about 3 5 Å in C. At 10^h 7^m the prominence had formed. D₁, D₂, b₁, b₂, b₃, b₄ were bright.
 (3) Lat. + 27° 5' W. Ca streamers extend to + 20° W. These extended to + 15° W. at 11^h 50^m, and arched towards the prominence at + 10° W.
 25. Lat. + 6° 5' E. An arch. Lower half visible in D₁, D₂, b₁, b₂. C displaced both ways in lower half. Maximum amount 0 5 Å to red in F. Prominence changing slightly. 60" and 30" high in Ca.

1909.

- January 26. Lat. -20° W. Changing. In Ca, at $8^h 31^m$ this prominence consisted of streaks extending from -4° to -21° W., and $10'', 15''$ and $30''$ high.
- February 4. (1) Lat. $+3^{\circ}$ W. Top bends eastwards. Ca streaks from the base of this prominence proceed both ways, and meet the limb at -4° W. and $+8^{\circ}$ W.
 (2) Lat $+24^{\circ}5$ W. Three big prominences with tops connected. A Ca streak connects this with the last prominence.
 6. Lat. $+23^{\circ}$ W. $55''$ high in Ca. Two Ca streaks from the top proceed eastwards. One meets the prominence at $+12^{\circ}$, and the other at $+15^{\circ}$.
 7. Lat. -18° E. Metallic. Bright lines: -7065, 6677, D₁, D₂, b₁, b₂, b₃, b₄, 5316·8, 5276·2, 5270·4, 5269·7, 5018·6, 5016 and 4924·1. F displaced $1\cdot0 \text{ \AA}$ both ways.
 10. Lats. $+49^{\circ}5$ and $+46^{\circ}$ E. Changing. At $9^h 42^m$, the northern arch had disappeared. At $11^h 20^m$, a thread joined these two groups
 16. (1) Lat. $+39^{\circ}5$ E. 14° broad, and general height $60''$ in Ca. A detached Ca cloudlet above the prominence is $105''$ high.
 (2) Lat. -15° W. Bright jet. In Ca at $8^h 7^m$ this was a large prominence extending from -14° to -19° W., and $120''$ high. By $10^h 13^m$, the whole prominence had gone except the jet at -15° W.
 20. Lat. $+27^{\circ}5$ E. A cloud connected to limb at two points. Changing. At $8^h 13^m$ in Ca it was $100''$ high. At $11^h 37^m$ the base extended from $+35^{\circ}$ to $+20^{\circ}$ E., the height was $90''$, and the top flowed eastwards as far as $+13^{\circ}$ E.
 23. (1) Lat. $-8^{\circ}5$ E. O slightly displaced to violet near the base, and to red near the top at lat. 7° E. $8^h 35^m$. Metallic. 7065, 6677, D₁, l₂, 5535·1, 5316·8, 5284·2, 5276·1, 52·4·9, 5018·6, 5016, 4924·1 and 4922 bright. At $8^h 49^m$ the shape of the prominence was different, and O was displaced to violet over nearly the whole prominence. The changes were shown by successive Ca photographs. At $8^h 5^m$ it was very bright, and $45''$ high, at $9^h 51^m$ it was a jet $70''$ high, and at $10^h 38^m$ it consisted of several thin streaks $70''$ in height.
 (2) Lat. -49° E. 6° broad, and $100''$ high in Ca at $10^h 38^m$, and 5° broad, and $65''$ and $75''$ high at $9^h 51^m$.
 25. (1) Lats. $+9^{\circ}$, $+5^{\circ}5$, $+1^{\circ}5$, and $-1^{\circ}5$ E. Connected in Ca. At $10^h 39^m$ in Ca, these consisted of thin slanting streaks $70''$ and $240''$ high, extending from $+8^{\circ}$ E to -5° E.
 (2) Lat. $+20^{\circ}$ W. Changing in Ca. At $8^h 9^m$ in Ca the prominence extended from $+19^{\circ}$ to $+26^{\circ}$ W., and was $40''$ and $240''$ high. At $10^h 39^m$ it was differently shaped, and was only $40''$ and $30''$ high.
 27. Lats. -11° , -7° and $-0^{\circ}5$ W. Connected, and formed a single prominence in Ca at $9^h 42^m$ $70'', 60''$ and $30''$ high. Changing. At $8^h 12^m$ it was only 4° broad, and $60''$ high.
- March 1. Lat. -12° W. A streamer from the top flows southwards as far as -22° . Changing. Differently shaped and $75''$ high at $8^h 16^m$ in Ca.
 5. (1) Lat. $+18^{\circ}$ E. Two prominences with tops connected. Top extends both ways to $+14^{\circ}$ and $+24^{\circ}$ E., and is $60''$ high in Ca.
 (2) Lat. $-42^{\circ}5$ W. In Ca at $8^h 27^m$ it was $50''$ high. At $10^h 51^m$ the height was only $20''$, and there was a streamer from the top meeting the limb at -30° E.
 6. (1) Lat. $+21^{\circ}$ E. Ca. Top extends both ways to $+26^{\circ}$ and $+17^{\circ}$ E. At $9^h 22^m$ it was an arch extending from $+16^{\circ}$ E. to $+21^{\circ}$ E. with a streamer from the top running as far as $+29^{\circ}$ E.
 (2) Lat. $+12^{\circ}5$ W. Ca streamers extend both ways. The highest point was $100''$ high in Ca at $8^h 24^m$, and $135''$ high at $10^h 13^m$.
 7. Lat. $+11^{\circ}$ W. Ca. A small, bright portion of this $10''$ high was seen in H. Portions of the prominence at $+8^{\circ}$ and $+8^{\circ}$ were intensely bright and were visible on flocculus plates ($8^h 5^m$, $8^h 28^m$, $8^h 35^m$) rising out of the spot on the limb.
 9. (1) Lat. $+2^{\circ}$ E. Faint in H. In Ca the main prominence was bright and $55''$ high and was surmounted by faint slanting streaks $100''$ high
 (2) Lats. $-33^{\circ}5$, -27° , $-24^{\circ}5$, -20° , and $-6^{\circ}5$ W. Changing in Ca. At $8^h 15^m$ this prominence extended from the equator to -40° E., and was $50''$ and $135''$ in height. Shapes were different at $10^h 29^m$ and $14^h 31^m$. At $10^h 29^m$, it was $40''$ and $155''$ high with a floating cloudlet $125''$ away from the limb. At $14^h 31^m$, it was only $40''$ and $80''$ high.

1909.

- March 10. Lat. + 3° E. Top flows southwards. In Ca it was 70" at 8^h 23^m; at 11^h 41^m the shape was slightly different, and the height was 65".
15. Lat + 8° 5 E. 35" high in Ca. A Ca streamer from the top meets the last prominence; another proceeds southwards, and meets the limb at - 4° E.
16. Lat - 22° W. Surmounted by a small detached prominence. F displaced 1.5 Å to violet on the detached part at - 21°, slightly in other places. 8^h 37^m. Form changing. The southern part was visible in D₁, D₂, b₁, b₂. At 9^h 37^m the whole prominence was a compact bank, 20" high, surmounted by a faint streak 10" higher.
17. Lat. - 28° W. Two prominences joined at the top. These were 10" high, and unconnected in Ca at 8^h 24^m. At 8^h 7^m these were joined, and 20" high.
19. Lat - 20° E. A cloudlet connected to limb by three thin streaks. Bright, and metallic at lat. - 23°. D₁, D₂, b₁, b₂, b₃, b₄ were bright. C slightly displaced both ways at base. At 9^h 3^m there was a prominence 20" high at - 21° and C was slightly displaced both ways from - 23° to - 18° at 9^h 8^m. At 9^h 49^m the cloudlet was connected to the limb by a single streak from - 20° E.
20. Lat. + 10° 5 E. 5° broad, and 60" and 50" high in Ca. C and D₃ were slightly displaced to red near the base. Metallic. 7065, 6677, 4922, D₁, D₂, b₁, b₂, b₃, b₄, 5018·6, 4924·1 bright. The whole prominence was visible in the last eight of these lines.
22. Lat. + 35° 5 N. 4° broad, and 50" high in Ca. A Ca streak from the top bends, and meets the limb at + 28° E. On the flocculus plate the prominence extends from + 28° E to + 30° E
25. Lat. - 28° 5 W. Ca. A long cloud almost detached from the limb, the northern end being 60" above the limb, and the southern end 170". At 9^h 42^m the northern end was only 50" above the chromosphere. At 11^h 51^m the northern end was attached to the chromosphere at - 20° W., the other end being 170" high. At 15^h 49^m the prominence was not visible.
27. Lat - 14° E. 60" and 20" high in Ca. Metallic. D₁, D₂, b₁, b₂, b₃, and b₄ bright. The prominence was very bright on the flocculus plates.
- April 6. Lat. + 2° W. C slightly displaced to violet over the whole prominence. A Ca streak from the top proceeds southwards, and meets the limb at - 7° W.
13. Lat. + 11° 5 E. A thin filament connecting a Ca cloud, extending from + 14° to + 6° E, and 60" in height, to the limb.
14. (1) Lat. + 4° E. Surmounted by a detached cloudlet about 60" high. 35" only in Ca. Changing, and 120" high in Ca at 8^h 1^m. Showed displacements to red, at the base of about 2 Å, to violet, at the detached top, of about 5 Å.
- (2) Lat. - 15° E. Slants eastwards. Shows slight displacement to violet. Changing in Ca. Differently shaped at 8^h 1^m
17. Lat. + 12° E. Very faint. An arch. Changing in Ca. At 8^h 7^m it was a hook-like prominence 50" high. At 8^h 46^m it was an arch 50" and 45", extending from + 10° to + 14° E.
21. Lat. + 20° 5 W. A detached jet. In Ca at 8^h 0^m this jet was 220" high with a slight elevation of the chromosphere, extending from + 26° to + 20° W. Small streaks from the main prominence meet the chromosphere at + 14° W. These streaks had disappeared by 9^h 19^m. At 10^h 52^m there was only the main prominence at + 20° 5 W.
23. Lat. - 14° W. Intensely bright. Metallic. D₁, D₂, b₁, b₂, b₃, b₄ bright. F displaced both ways in several places between - 12° and - 16° W. Greatest amount being 2 Å to violet, and 2.2 Å to red at - 12° at 9^h 45^m. Bright lines (9^h 45^m to 10^h 0^m).

1909.

- April 23. The height was only 15" at 9^h 45^m, and was less than 10" at 10^h 5^m. The direction of the displacement changing rapidly, 10^h 10^m. Displacement to violet at top 1.5 Å at 10^h 12^m. Displaced both ways at lat. — 13° 5, 2.2 Å to red, and 3.8 Å to violet, close to limb at 10^h 37^m; only 1 Å both ways at 10^h 39^m; no displacement except at that place. About 2 Å both ways at 2 points at 10^h 40^m. Height less than 10" at 10^h 35^m, 20" at 10^h 45^m. Growing; 25" at 10^h 50^m. Not much change in prominence, but F was again displaced about 2 Å both ways at 11^h 4^m. [S S.]
25. Lat. — 30° E. A cloudlet connected to limb by a short stem. A streamer from top flows as far as — 23° E. Changing. At 9^h 25^m this consisted of two vertical streaks connected at top by another streak.
26. Lat. + 7° 5 W. Ca. Faint. The height of the main prominence is only 30". It is surmounted by a detached cloudlet 45" high.
27. Lat. — 21° W. The top bends southwards as far as — 24° W. Changing. Shapes slightly different in Ca at 9^h 7^m, and at 11^h 7^m.
- May 9. (1) Lat. — 23° 5 E. A streak slanting eastwards, and surmounted by a detached cloudlet. The whole prominence except the two ends had gone by 10^h 8^m.
- (2) Lat. — 58° 5 E. Bright at top and base. Changing rapidly. Shape slightly different at 8^h 54^m. Streaks at top rapidly vanishing. The prominence was not found in the Ca photograph taken at 8^h 20^m.
- (3) Lat — 16° 5 W. O slightly displaced to red at base at lat. — 15° 5. Metallic. D₁, D₂, b₁, b₂, b₃, b₄, 7065, 6677, 5018·6, 5016, 4924·1, and 4922 bright. At 8^h 37^m F was displaced both ways for 2 Å at — 15° 5, and 1 Å both ways at — 14° 5. Bright part 20" high at 8^h 39^m. At 9^h 32^m, prominence was small, and only 10" high. But O was still slightly displaced to red at base.
14. Lat. + 24° E. Top broader. A streamer from the top flows northwards, and meets the one from the top of the prominence at + 44° 5. Another streamer flows eastwards, and meets the limb at + 18° E.
16. Lat. — 35° 5 W. A streamer from the top flows southwards as far as — 41° W. Another Ca streamer meets the limb at — 29° W. The prominence is surmounted by a very faint detached cloudlet 240" high at — 37° W.
26. Lats. + 3° and + 17° W. Connected to limb, and form a single prominence in Ca extending from — 4° to + 24° W, and 80" high.
30. Lat. — 25° E. The top flows eastwards as far as — 20° E. 60" high in Ca. A thin Ca streak from the middle of this prominence, proceeds southwards, and meets the limb at — 33° E.
- June 20. Lat. — 2° 5 W. A streamer from this proceeds southwards, and meets the limb at — 8° W. Changing slightly. This streamer was gone by 9^h 35^m.
23. Lat. + 23° 5 W. Changing. At 8^h 7^m, it was a massive cloud 70" high with a brighter core in the middle and almost but not quite touching the limb throughout. At 8^h 28^m it had got farther removed from the limb in places, and was 75" high. At 8^h 50^m, when observed in O, it was 120" high and had broken up into streaky patches which showed a displacement to violet of about 3 Å and less in O. At 9^h 21^m it had risen to 230"; but by 9^h 50^m had fallen to 150".
28. Lat. + 6° 5 E. Ca. An irregular arch. A curved Ca streak 120" high floats over it from lat. + 9° to + 2° E. At 8^h 54^m there was a very small hydrogen prominence at + 6° E which showed slight displacement of O to red.

KODAIKÁNAL,
8th December 1909.

C. MICHIE SMITH,
Director, Kodaikánal and Madras Observatories.
